# CONNECTED JOBSITE FOR TIME & MATERIALS

Xalt makes it easy to accurately track workers' hours, improve time planning, and automate the material requisitions process from any jobsite. These native apps for iOS, Android, and browser help you work more efficiently and productively than ever. Easily configurable according to user roles, our apps enable precise, standardised timekeeping and on-time job completion.
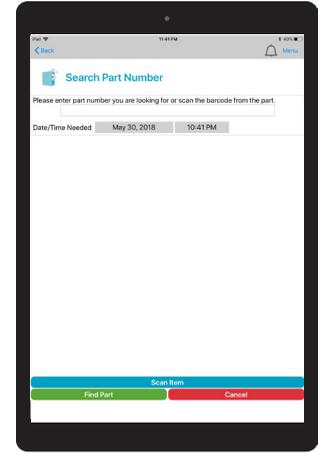

Using Xalt technology, daily reports capture labour information and work performed by employee, job, cell or phase, and location. Allocating hours to specific actions ensures time and materials are precisely logged. "Work performed" information, when properly documented, enables accurate invoicing at the end of the job and budgeting throughout a job, reducing disputes in final billing and ensuring procedural compliance.

Accurate Time Tracking and Planning

The images below display how safety issues and requirements are recorded throughout the day, preserving the historical record of each event, whether incidental or preventative. This improves time planning and promotes optimal scheduling on future jobs.

Notice that all required input is made simple for each employee to record. Historical records are kept according to jobsite, employee, and cell or phase, streamlining the process and reducing administrative headaches and mistakes.

Automated Material Requisition

Every jobsite must request materials to be ordered to fulfill a job requirement, whether it's a tool, a unique piece of equipment, or another item. Choosing quantities and descriptions according to a standardised, easy process ensures that the procurement department can allocate the right materials to the right jobs as quickly as possible. This lean construction practice reduces delays and errors, eliminates over-purchasing and error-related restocking fees, and promotes schedule adherence.

In the example to the right, you can see how easy it is for employees to enter, review, and submit a request to procurement.

With access to the Xalt requisition dashboard, there is no mistaking the status and forecast of each requisition request. The flow of information between departments remains clear and concise, and accurate historical records are preserved.

About Hexagon

Hexagon is a global leader in digital solutions that create Autonomous Connected Ecosystems (ACE), a state where data is connected seamlessly through the convergence of the physical world with the digital, and intelligence is built-in to all processes.

Hexagon's industry-specific solutions leverage domain expertise in sensor technologies, software, and data orchestration to create Smart Digital Realities™ that improve productivity and quality across manufacturing, infrastructure, safety and mobility applications.
